OBJECTIVE

Entry-level IT/Software role leveraging PHP, Python, Java, web development, debugging, and testing basics to build reliable applications and support organizational goals.

EDUCATION

- B.E. Information Technology (Pursuing) | Singhad College of Engineering, Pune | CGPA: 7.17
- Diploma, Computer Engineering | Government Polytechnic, Ahmednagar | 2023 | 78.17%
- Class X | Army Public School, Ahmednagar | 2019 | 65%

SKILLS

- Languages:** PHP, Python, Java, JavaScript
- Web:** HTML, CSS, jQuery
- Tools/OS:** Linux, phpMyAdmin
- Core:** Software Development, Debugging, DB Basics, Testing Fundamentals
- Networking Basics:** Strong understanding of IP addressing, subnetting, DNS, DHCP, routing protocols, network topologies (Star, Bus, Ring, and Hybrid), network devices (routers, switches, gateways, firewalls), and basic troubleshooting.
- Professional:** Communication, Problem-solving, Team Collaboration, Quick Learner

EXPERIENCE

Industrial Trainee - PHP Development (Internship)

Jul 2023 - Aug 2023

Poorniyash Infotech, Ahmednagar

Supported PHP backend development and bug fixes for web application modules. Assisted with database tasks and debugging to improve stability and correctness.

PROJECTS

Campus Connect (MERN + ML)

Built a campus management system with role-based dashboards, course/assignment workflows, and notifications. Implemented JWT authentication and integrated a Flask-based ML API for performance analytics/prediction. **Tech:** React, Node.js, Express, MongoDB, Python, Flask, scikit-learn.

Network Simulation using Cisco Packet Tracer

- Designed and simulated network topologies using Cisco Packet Tracer to understand real-world networking scenarios.
- Implemented a Star Topology to analyze centralized network communication and performance.
- Developed a Hybrid Topology combining multiple network structures to improve scalability and fault tolerance.
- Created a Home Security Network System using a gateway, integrating devices such as cameras and sirens.
- Enabled monitoring and control of the network through a mobile device, demonstrating IoT-based automation concepts.

Smart Eye - Vehicle Detection System

Aug 2023 - Sep 2023

- Developed a system for vehicle counting, speed checking, classification, and number plate recognition.
- Automated record storage for traffic/toll/security use cases.
- Tech:** Python

Static Restaurant Website

- Created a responsive website with animations and forms for table registration and customer feedback.
- Tech:** HTML, CSS, JavaScript, jQuery

Python CLI & GUI Tools

- Built CLI calculator, to-do app, Tkinter-based currency converter (API), and password generator.
- Tech:** Python, Tkinter, Requests
